

Fire pit with free standing cooking grill

1. Remove all packaging.
2. Put the base on a flat even surface.
3. Place the fire pit bowl on to the stand.

4. The charcoal plate sits nicely in to the round recessed area in the centre of the bowl.

5. Let your fire burn for long enough to produce some hot glowing embers. Then using some fire pit tools push these to one side and place the free standing cooking grill over them to get cooking. You can regulate the heat by adding or taking away the hot embers from under the grill.

Warning:

For outdoor use only. Keep children and pets away from the brazier when lit. Always position away from buildings or combustible objects on a safe, level, non-flammable surface. If using on a paved patio, place on an additional protective paving stone made from solid natural stone or concrete at least 5cm thick. This will avoid possible discolouration and cracking of your patio, as some mock slabs made from resin or ceramic may be susceptible to heat damage. Only for use with logs or charcoal. Never leave a lit fire pit unattended or move when lit. Allow to cool before emptying any ash or moving it. Do not move when lit.

Caring for your fire pit:

When not in use, we recommend standing the fire pit in a sheltered spot.

To keep the metal in good condition, regularly coat the surfaces with cooking oil or reapply heat-retardant paint. Over time, exposed metal will naturally rust to produce an oxidised protective coating, but the bowl will retain its structural integrity over many years of use.
